

# Lone Worker App

by Vatix

Our lone worker app has been accredited with BS8484: 2016, the lone worker & vulnerable people protection standard of quality and safety trusted by organisations.

## Get Immediate Help with Just One Click

Give your people the peace of mind that help is only one click away. A lone worker can discreetly activate the alarm to initiate a two-way voice call with either our alarm monitoring staff or your designated responders.

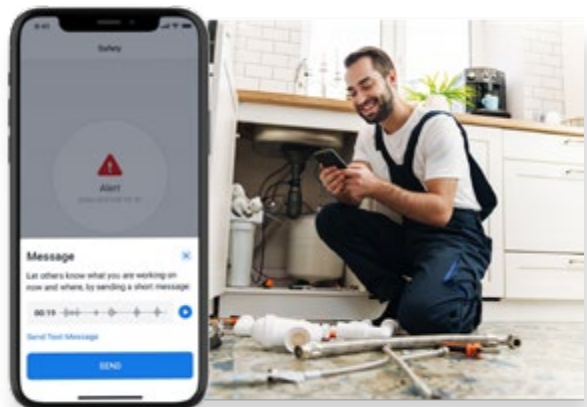

## Add context with voice and note updates

Lone workers can add voice or written updates about what they are doing, where they are going, who they are visiting, and so on. This contextual information is logged on the user's timeline within Protector.

If the alarm is activated, either proactively or via a missed check-in, the responder can access the updates to gain better insights into what may have happened and aid in a timely, positive response.

## Timed Check-Ins

Set a timed check-in so you know your staff are safe and well. When the check-in period expires, the user will receive a notification asking them to confirm they are okay. An automatic alarm will be raised if they fail to respond.

## In-Depth Feature View

### Timed Alert

You are able to set a safety timer for the period of time you are carrying out an activity.

### Easy Onboarding

The visual interface makes it simple and intuitive to get your employees set up and using the service within minutes.

### Licence Management

The platform provides the flexibility to re-assign app user licences.

### iOS & Android

The app is available on iPhone and Android devices.

### Check-in

Schedule a check-in so that you are prompted to notify us that you are okay.

### Voice Messaging

Leave a recorded voice message which the alarm monitoring operators can listen to should your alarm be activated or the timer has elapsed.
